

Scanning with Mobile Devices (iOS / Android)

Smartphones and tablets support a camera scanner. This function can be activated/deactivated under Settings. The following default values apply:

Device type	Default value
Smartphone	Active
Tablet	Inactive
PC/Laptop	Not available

The camera scanner always covers the entire screen and does not automatically focus on the barcode.

Products

In the product overview, you have a scanner symbol placed centrally at the bottom of the grid.

Order entry

When entering Orders or Quotations, you will also find the scan button at the bottom centre of the grid. Scanning via this button directly searches for the single product and selects it if found.

For mass entry, select the scanner symbol at the top right next to the kebab menu and scan the products one after another. Once you have documented all products, you can Add to cart.

Please note the negative entry from an Order template.
