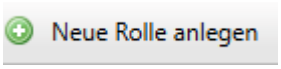
Roles

General

This section concerns the determination of what a User is allowed to do in the backend and should not be confused with the Roles in the Basic configuration area.

Create a new Role using the green plus.



Assign a meaningful name and press the "Next" button.

Define the required Types for the Role and save it. Afterwards, you can assign the Role to the Users of the backend.

For the Types Statistics, Individualreports and Lists, further restrictions can be made for backend Users, i.e. here you can specify which User is allowed to see which Statistics.

You can also make the Settings via the individual Types. A User with Administrator rights always has access to all Statistics, Individualreports and Lists.
