Photo detail page

Summary

The photo detail page is used to display and edit a single photo.

Only one photo is displayed on the photo detail page. The photo can be viewed in the normal view or in fullscreen. Additionally, the photo's metadata can be displayed.

Via the functions of the photo detail page, the photo can be shared or saved locally and – if possible – edited.

Functions in the title bar

Icon	Explanation
	Share
	Save to local file system

Header

1. Switches to the In progress mode

Photo display

A single photo is displayed on the photo detail page.

Initial display

The photo is shown in the initial display:

- displayed in the correct aspect ratio

- shown on a black background
- displayed centred

Full screen display

The single photo can be switched to fullscreen mode by clicking.

In fullscreen mode:

- the photo is displayed fullscreen
- all control elements are Hidden

A further click exits fullscreen mode and the photo is displayed again in the initial view.

Zoom

The display of the photo can be adjusted by zoom.

A double click switches between:

- Scale to fit: The photo is fully fitted into the available area
- Scale to zoom: The photo is displayed enlarged

On devices with touch control, the photo can also be zoomed in or out using pinch to zoom (two-finger gesture).

Data and metadata

The metadata of the currently displayed photo can be shown on the photo detail page.

The data relates exclusively to the photo displayed on the photo detail page.

PanelBar

The PanelBar with the photo data is only Visible if it is possible to edit at least one entry.

If no entry can be edited, the PanelBar is not displayed.

Editing a photo

The function in the header allows switching to In progress mode.

Whether editing is possible depends on the available editing options. The PanelBar with the photo data is only displayed if at least one entry can be edited.

Distinction from other image views

The photo detail page always shows a single photo.

It thus differs from the Presentation mode Photos in the Photos widget and from the Presentation mode Products in the Order entry:

- Photo detail page: a single photo with associated metadata.
- Presentation mode Photos: multiple photos can be selected and viewed via thumbnails.
- Presentation mode Products: multiple product pictures of a product can be viewed in the Order entry.
